

VISUALIZATION OF THE PRODUCTION PROCESS

The Windows Control Center (WinCC) flexible / TIA V14 Software by Siemens offers the possibility to connect the process control (PLC) with the user interface on a central PC.

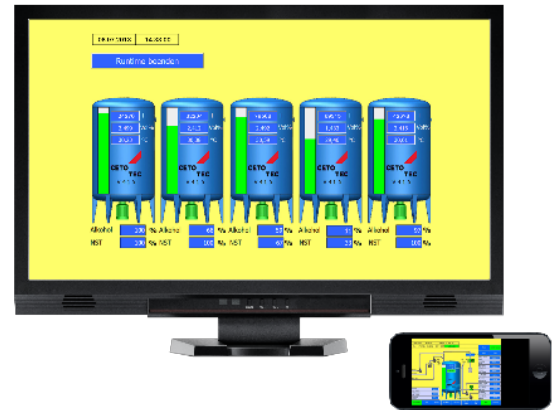

Description:

With the help of a modern and customized visualization software, it is possible to directly monitor and control the PLC via a PC or any other electronic visualization device. Several fermenters or other machines such as filtration systems can be integrated and therefore centrally monitored and controlled. This offers the possibility to pool several touch panels into one system and significantly save investment costs for our customers.

Function:

The WinCC flexible / TIA V14 Software by Siemens is the interface between the process control (PLC) and any visualization device that you would like to use. It can be applied as HMI-Component (Human Machine Interface) of control systems, such as Siemens or Allen Bradley.

■ VISUALIZATION

Advantages:

- Central logging and display of all production data
- Possibility to activate all relevant components
- Professional archiving of all production data
- Possibility to remote control and maintain your production
- Easy connection to Tablet-PC or Smartphone
